Harlo Introduces the attachment-ready **COMPACT** RTFL.

**HARLO** expands its product offering to include the all-new **COMPACT** rough terrain forklift, designed especially for agriculture, construction, nurseries, vineyards, orchards, landscaping, and forestry.

**Attachment ready for all your diverse needs!**

Today HARLO announces the introduction of the attachment-ready **COMPACT** rough terrain forklift, marking the addition of an all-new product to its Rough Terrain Forklift equipment lineup. When you want the best of both worlds, exceeding the standard mast and forks, the Harlo **COMPACT** RTFL is the way to go, accepting attachments ranging from a snowblower to a post-pounder and beyond.

The **COMPACT** has been strategically designed for specialty applications suitable for a multitude of producers such as construction, vineyard, orchard, and other fruit and vegetable producers.

“With the introduction of the **COMPACT**, we’re growing our portfolio with a product that is designed to ANAI/ITSDF B56.6 for the specialty applications for which Harlo is known,” said Jim Mueller, National Sales Manager of Harlo. “Our dealers and customers know and trust that Harlo is the first choice of fruit and vegetable producers, so we keep that notion at the forefront of our design and engineering processes, excitedly entering this new market.”

Keeping in mind the specialty operations, Harlo has designed the **COMPACT** to be 60” wide and includes 4WD via a hydrostatic pump. Simplified ergonomic access allows for routine maintenance and a rear door makes cleaning the radiator of dust and debris easier than ever.

The Harlo **COMPACT** keeps running so you can keep harvesting.

Harlo has once again partnered with John Deere (2.93) and Cummins (2.84) diesel engines to power the **COMPACT**, delivering 74 HP without using DEF or diesel particulate filters (DPF). The workhorse engines drive the hydrostatic pump, propelling the **COMPACT** while retaining the power needed to operate attachments at 34 GPM. Regardless of the location of your production environment, the **COMPACT** increases control and efficiency for the operator with its new features, making harvesting and any other time-sensitive production schedules less challenging to manage. The Harlo **COMPACT** stays running for you, and we expect it to be the ideal fit for your harvesting needs.

Standard Features – 60” wide, Up to 25 mph, Fuel Capacity – 25.6 gal, Tires – 4 options, Mast – 12’ or 10’, Rear Hitch Pin, Rear collision sensors, Rear Door access – LED Driving lights, Control - Finger or Joystick.

Options - CAB – Full Glass, A/C & Heat, Jump Assist, Bin Clamp, Fire Extinguisher.

The Harlo Compact rough terrain forklift will make its public debut at the 2025 World Ag Expo, February 11<sup>th</sup> – 13<sup>th</sup>, 2025, in Tulare, California. It will be displayed in HARLO booth O34 in the North Exhibit at the International Agri-Center. The compact will be ready for production in 2026.
